(9635 stations with MaxN>0)

mod18 demersal fish
(2391 stations with MaxN>0)

mod19 small pelagics
(1936 stations with MaxN>0)

adjustment

- stratified by SPACE_STRAT
- standardized over depth bins

..... divider: RCK is an independent hardness axis, scored against its complement
GVL/SND/MUD are a closed triangle – A ranks them against one another only
