

**mod1 sharks**  
(419 stations with MaxN>0)

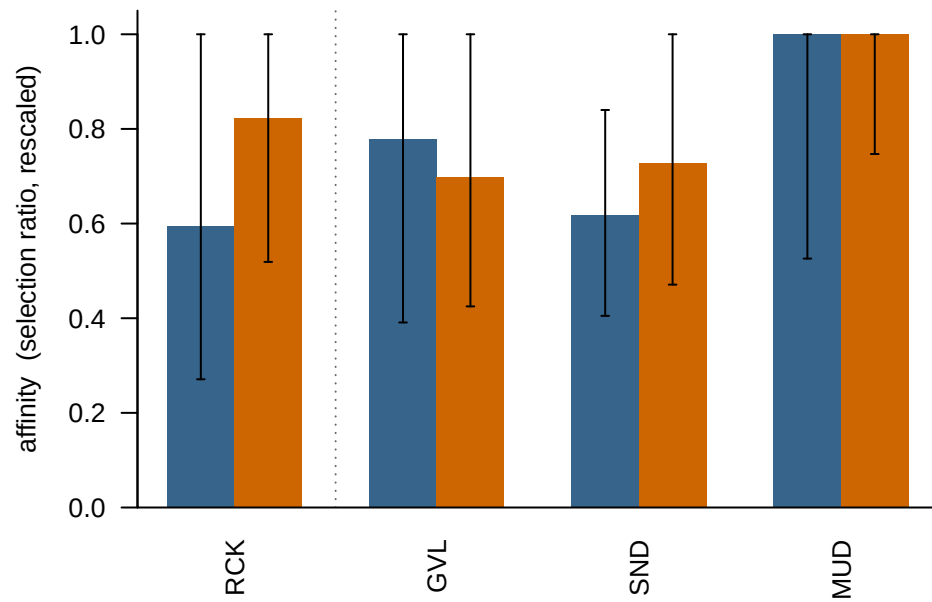

**mod2 pelagic piscivores**  
(5204 stations with MaxN>0)

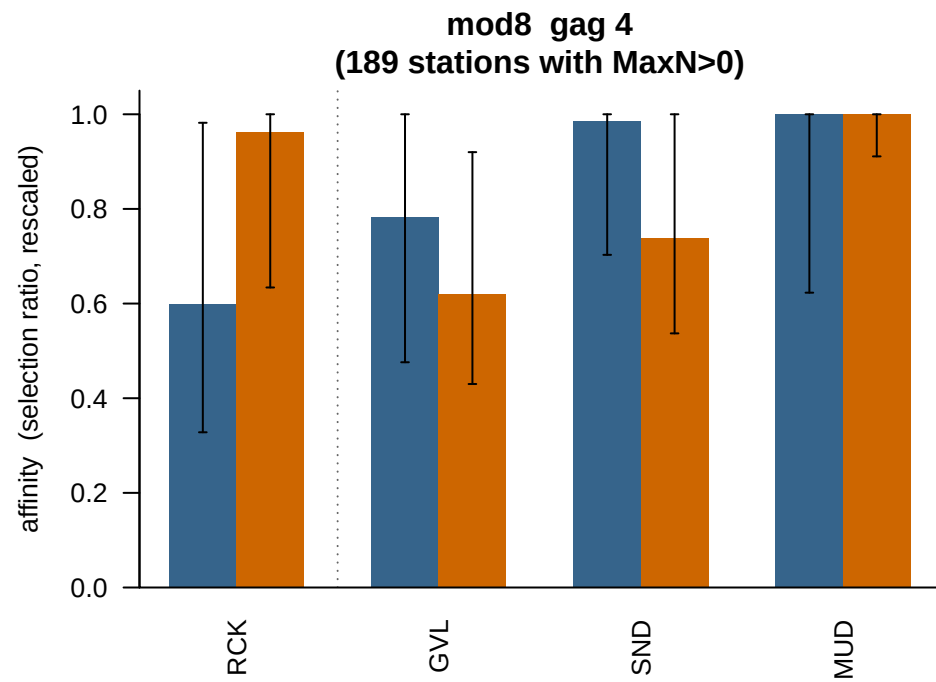

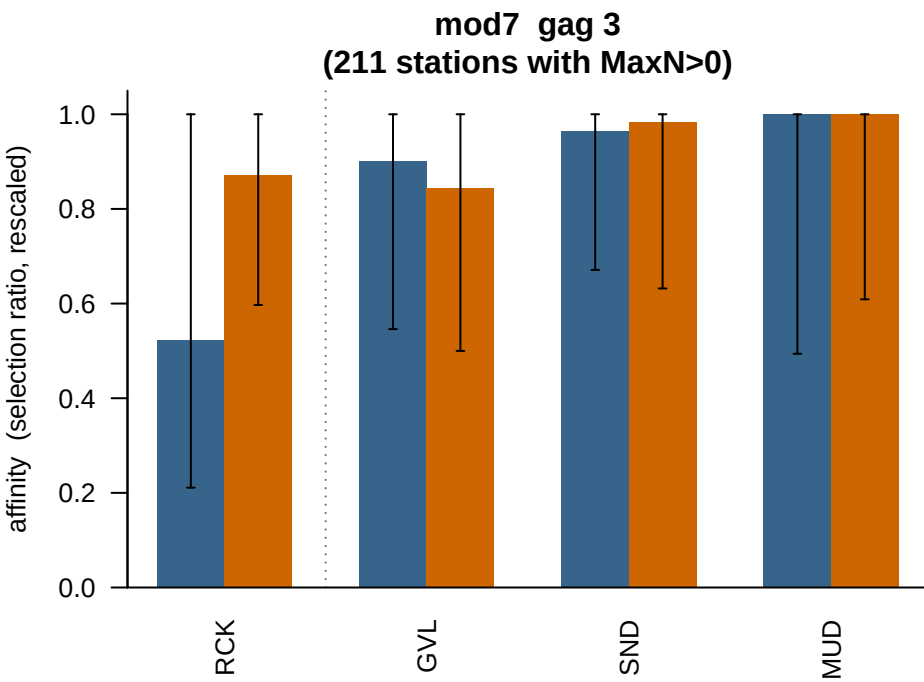

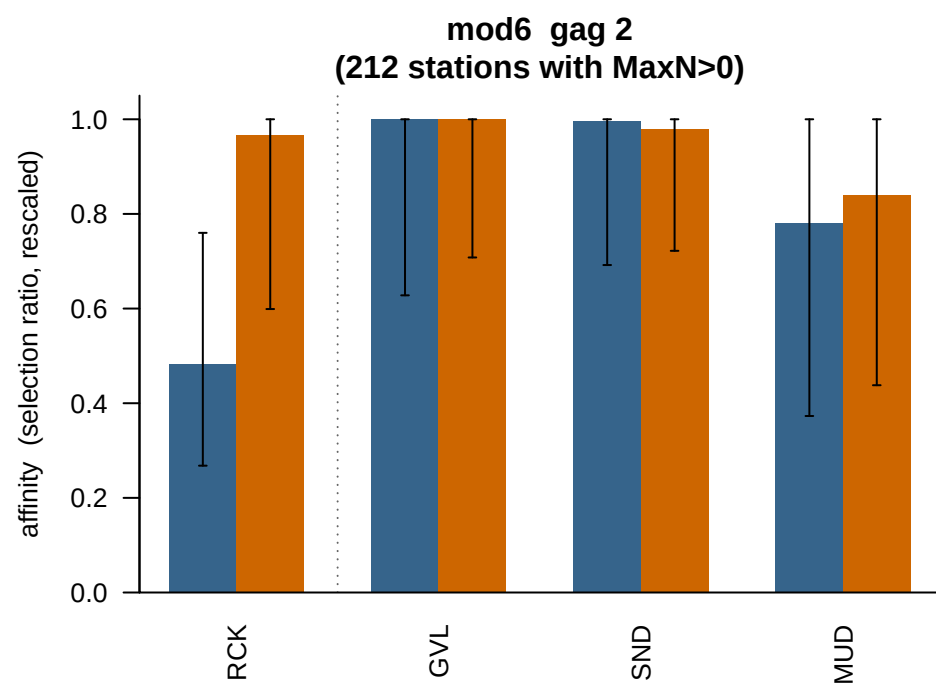

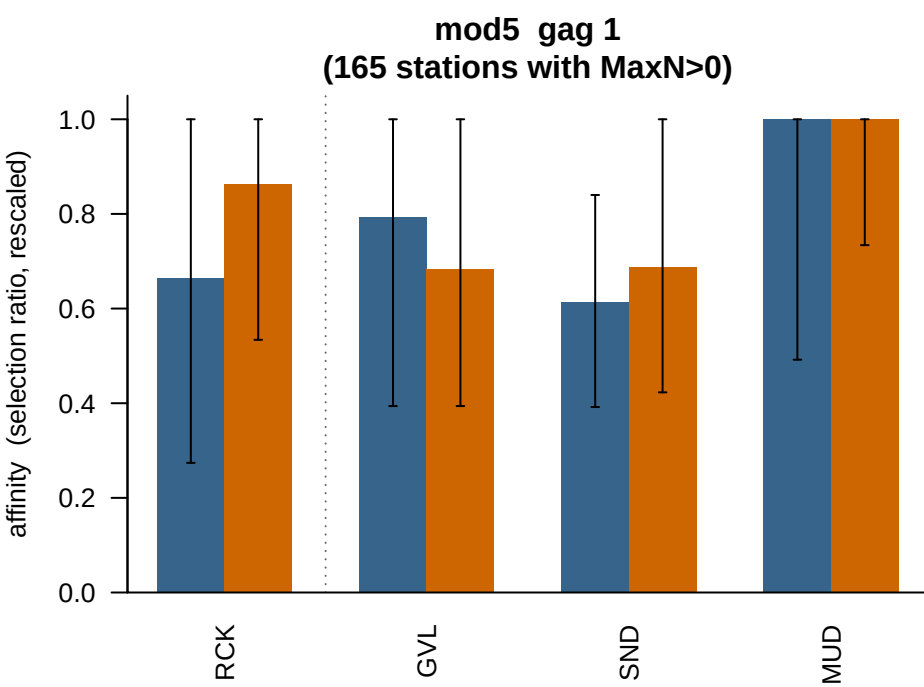

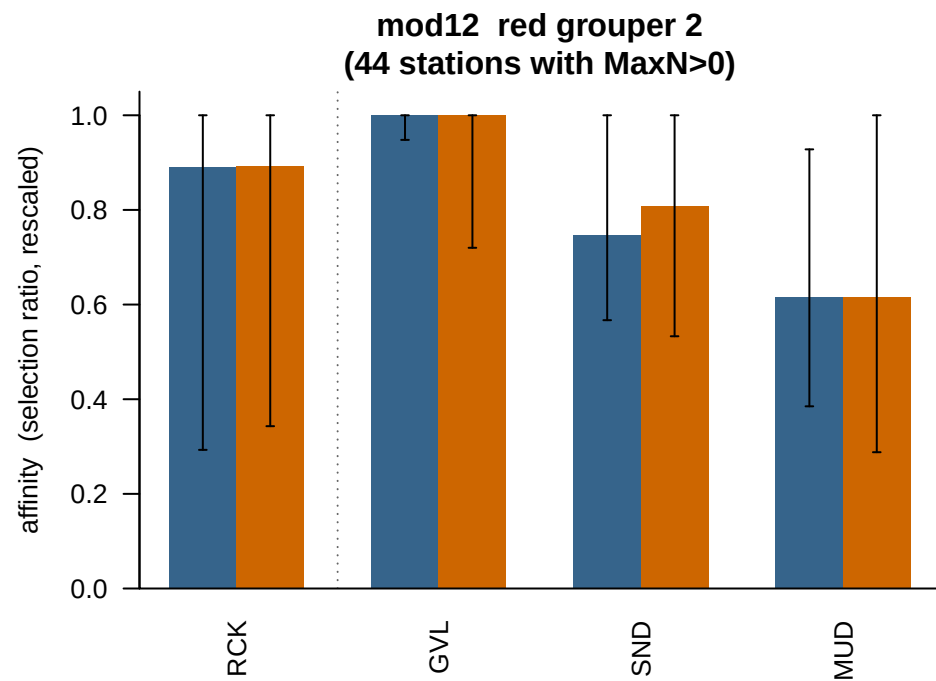

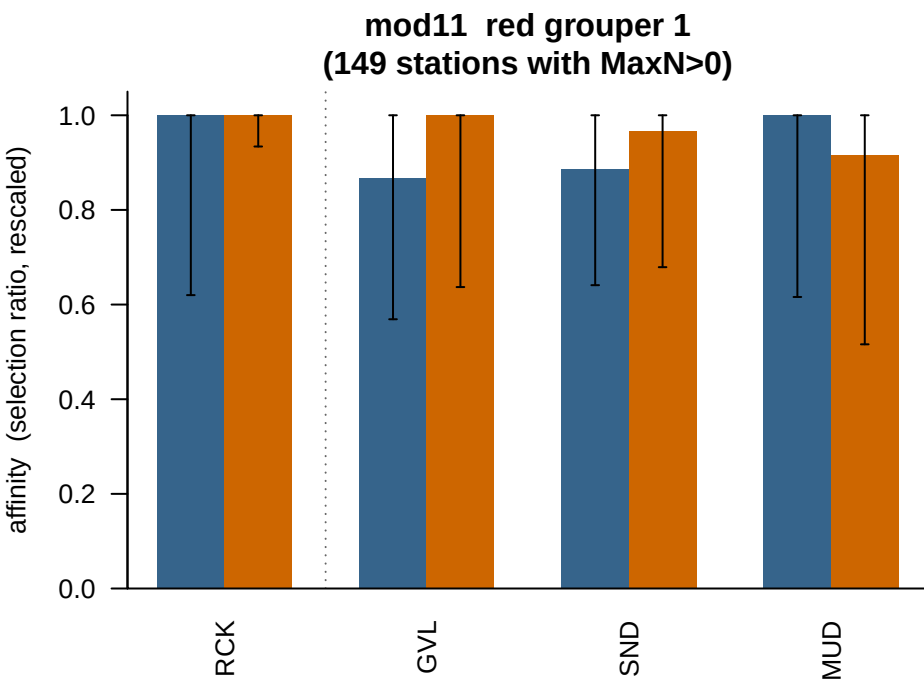

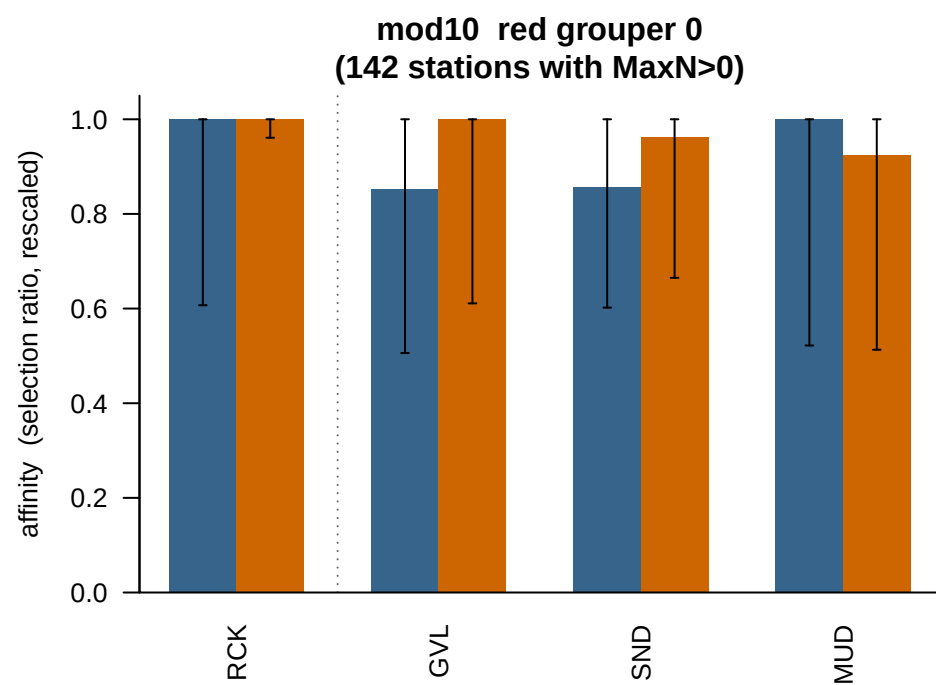

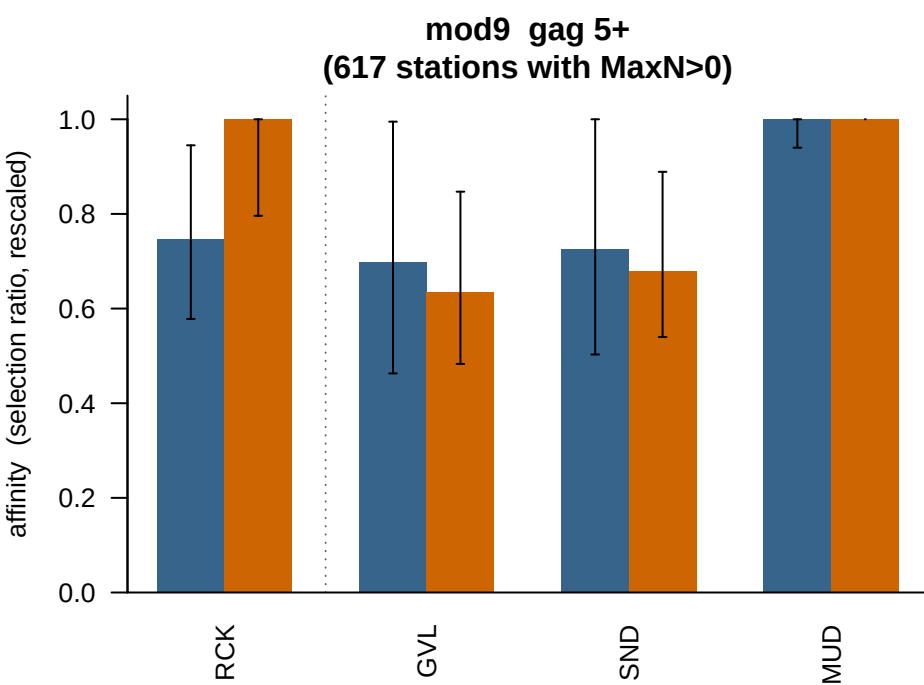

**mod3 snappers**  
(6810 stations with MaxN>0)

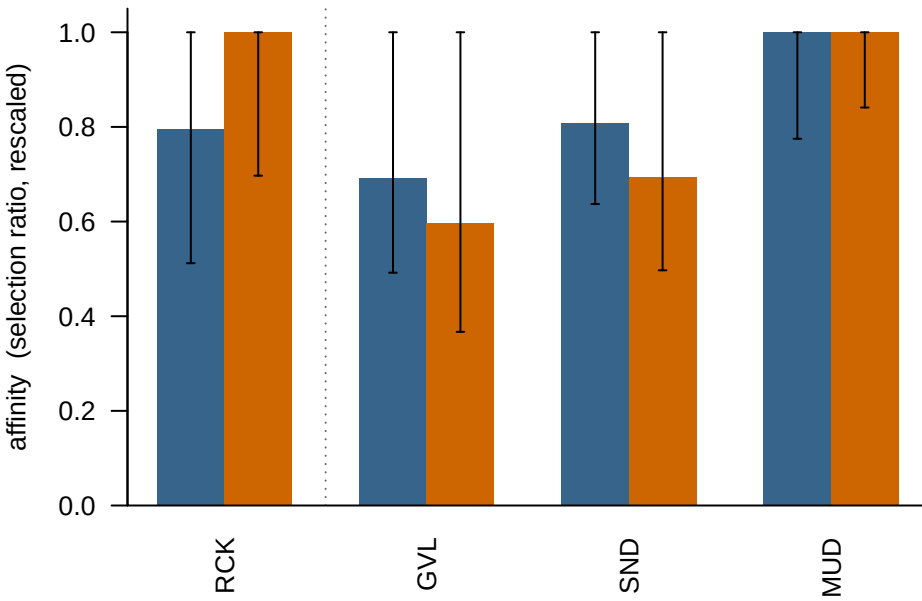

**mod4 gag 0**  
(183 stations with MaxN>0)

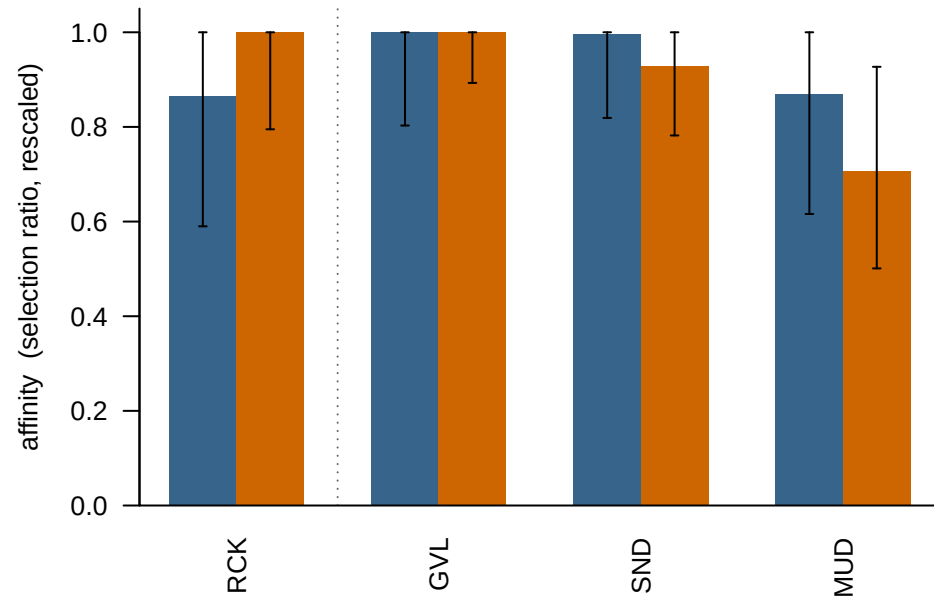

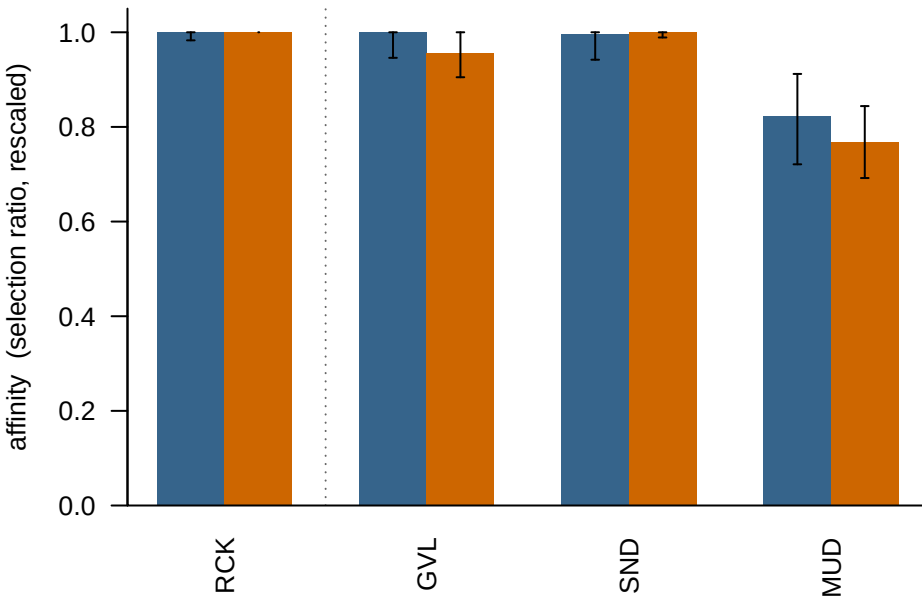

**mod13 red grouper 3**  
**(160 stations with MaxN>0)**

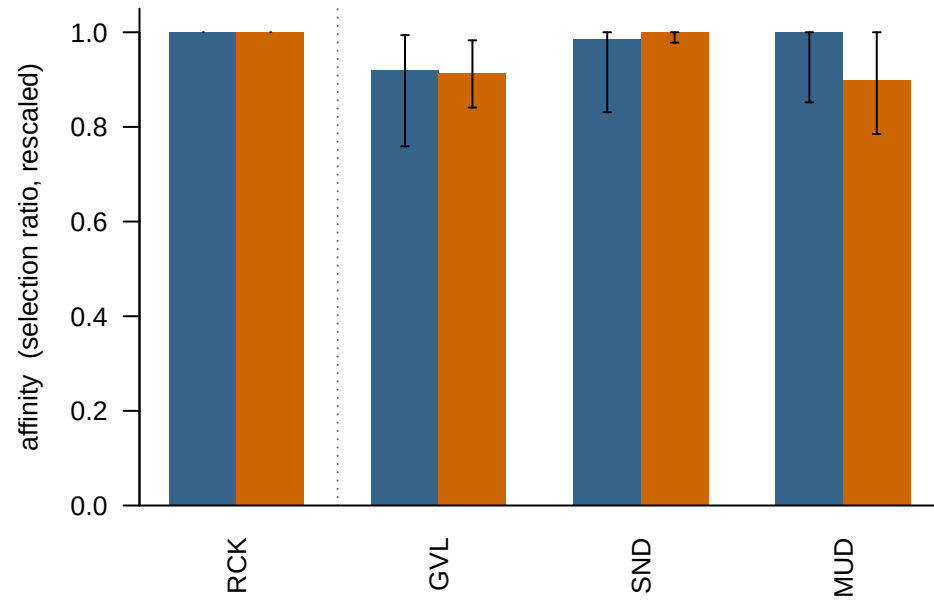

**mod14 red grouper 4**  
**(373 stations with MaxN>0)**

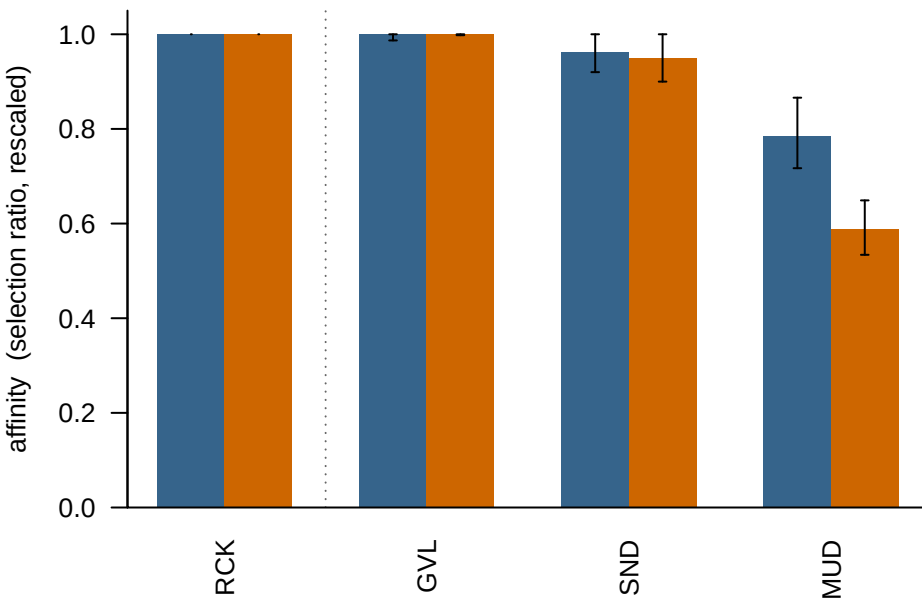

**mod15 red grouper 5+**  
**(2434 stations with MaxN>0)**

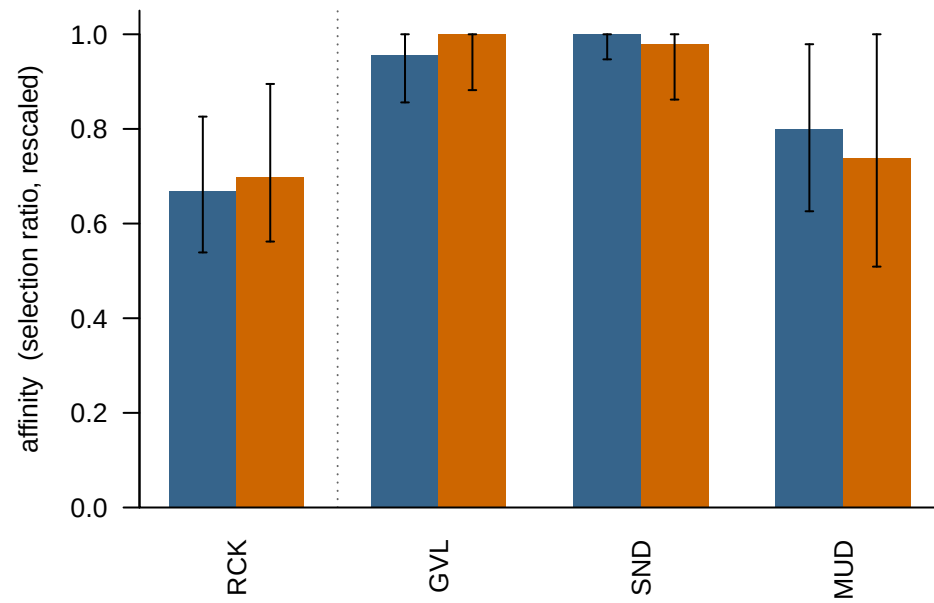

**mod16 large reef fish**  
**(2510 stations with MaxN>0)**

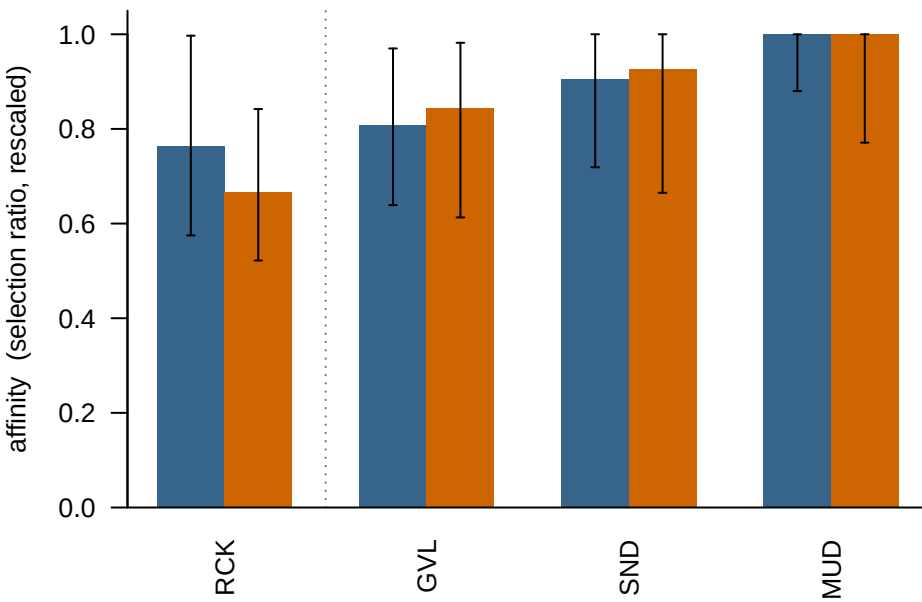

**mod17 small reef fish**  
(9635 stations with MaxN>0)

**mod18 demersal fish**  
(2391 stations with MaxN>0)

**mod19 small pelagics**  
(1936 stations with MaxN>0)

adjustment

- stratified by SPACE\_STRAT
- standardized over depth bins

..... divider: RCK is an independent hardness axis, scored against its complement  
GVL/SND/MUD are a closed triangle – A ranks them against one another only
